                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                           The present invention relates to the isolation of Corynebacterium glutamicum metabolic pathway (MP) proteins, and the polymucleotide sequences encoding them. The MP proteins are enzymes involved in the metabolism of molecules important for the normal functioning of cells (e.g. amino acids, vitamins, cofactors, nucleotides and nucleosides, or trehalose). The polymucleotide sequences encoding the MP proteins are useful for producing fine chemicals, particularly organic acids, non-proteinogenic amino acids, purine and pyrimidine bases, nucleosides, nucleotides, lipids, (un)saturated fatty acids, diols, carbohydrates, aromatic compounds, vitamins, cofactors, polyketides and enzymes. The fine chemicals are useful in the food, animal feed, cosmetic or pharmaceutical industries. ABS65342-ABS65364 encode the C. glutamicum MP
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                 New metabolic pathway genes of Corynebacterium glutamicum for producing fine chemicals, e.g. lipids, (un)saturated fatty acids, vitamins, cofactors or enzymes used in food, feed, cosmetics or pharmaceutical
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                     Claim 1;
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                       22-DEC-2000;

cc expression in host cells and production or modulation of production of cf fine chemicals, such as, an organic acid, a proteinogenic or nonproteinogenic amino acid (preferred), a purine or pyrimidine base, a cc nucleoside, a nucleotide, a lipid, a saturated or unsaturated fatty acid, ca diol, a carbohydrate, an aromatic compound, a vitamin, a cofactor, a colyketide, or an enzyme. The presence of (I) or SMP proteins (III) cc encoded by them are used for diagnosing the presence or activity of cc corynebacterium diphtheriae in a subject. (I), (III) or host cells corynebacterium diphtheriae in a subject. (I), (III) or host cells corynebacterium diphtheriae in a subject. (I), (III) or host cells containing them are used to map genomes of organisms related to C. cc glutamicum, identify and localise C. glutamicum sequences of interest, in cevolutionary studies, in determining SMP protein regions required for metabolism of sugars, and in modulating the metabolism of sugars, and in modulating high-energy molecule production of containing supported to contain a cell (i.e. ATP, NADPH)
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                              Query Match

Novel polynucleotides derived from Coryneform bacteria, for identifying mutation point of a gene, measuring expression of a gene, analyzing expression profile or pattern of a gene and identifying homologous gene.

SEQ ID NO 2905; 246pp + Sequence Listing; English

the expression profile or expression pattern of a gene derived from Coryneform bacterium, and identifying a homologue of a gene derived from coryneform bacterium. Coryneform bacteria are useful for producing amino acids, nucleic acids, vitamins, saccharides and organic acids, particularly L-lygine. The present sequence is a nucleic acid described in the exemplification of the invention. Note: The sequence data for this patent did not form part of the printed specification, but was obtained in electronic format directly from the European Patent Office The present invention provides a number of nucleotide and protein sequences from the Coryneform bacterium Corynebacterium glutamicum. These are useful for identifying the mutation point of a gene derived from a mutant of coryneform bacterium, measuring expression amount and analysing

CC metabolism and oxidative phosphorylation (SMP) proteins given in AAB79243
CC to AAB 79633 which are involved in carbon metabolism and energy
CC production. The C glutamicum SMP gene can be used in vectors (II) for
CC expression in host cells and production or modulation of production of
CC fine chemicals, such as, an organic acid, a proteinogenic or
CC comproteinogenic amino acid (preferred), a purine or pyrimidine base, a
CC condition of a romatic compound, a vitamin, a cofactor, a
CC diol, a carbohydrate, an aromatic compound, a vitamin, a cofactor, a
CC polyketide, or an enzyme. The presence of (I) or SMP proteins (III)
CC encoded by them are used for diagnosing the presence or activity of
CC cortaining them are used for map genomes of organisms related to C.
CC glutamicum, identify and localise C. glutamicum sequences of interest, in
CC evolutionary studies, in Metermining SMP protein regions required for
CC function, in modulating SMP protein activity, in modulating the
CC metabolism of sugars, and in modulating high-energy molecule production
CC in a cell (i.e. ATP, NADPH) sugar ven in AAB79243

CC AAF71360 to AAF71750 encode the Corynebacterium glutamicum sugar CC metabolism and oxidative phosphorylation (SMP) proteins given in AAB79243 CC to AAB 79633 which are involved in carbon metabolism and energy CC production. The C glutamicum SMP gene can be used in vectors (II) for CC expression in host cells and production or modulation of production of CC fine chemicals, such as, an organic acid, a proteinogenic or conproteinogenic amino acid (preferred), a purine or pyrimidine base, a cC nucleoside, a nucleotide, a lipid, a saturated or unsaturated fatty acid, a diol, a carbohydrate, an aromatic compound, a vitamin, a cofactor, a cC of containing them are used for diagnosing the presence or activity of CC containing them are used for diagnosing the presence or activity of CC containing them are used to map genomes of organisms related to C. CC glutamicum, identify and localise C glutamicum sequences of interest, in CC evolutionary studies, in determining SMP protein regions required for CC unction, in modulating SMP protein activity, in modulating the CC metabolism of sugars, and in modulating high-energy molecule production or a cell (i.e. ATP, NADPH)
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                          Query Match

These are useful for identifying the mutation point of a gene derived from a mutant of coryneform bacterium, measuring expression amount and analysing the expression profile or expression pattern of a gene derived from Coryneform bacterium, and identifying a homologue of a gene derived from coryneform bacterium. Coryneform bacteria are useful for producing amino acids, nucleic acids, vitamins, saccharides and organic acids, particularly L-lysine. The present sequence is a nucleic acid described in the exemplification of the invention. Note: The sequence data for this patent did not form part of the printed specification, but was obtained in electronic format directly from the European Patent Office
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                 Nakagawa

The PTS nucleic acids and proteins are useful in the identification of microorganisms which can be used to produce fine chemicals, for modulating fine chemical production in C. glutamicum or related bacteria, the typing or identification of C. glutamicum or related bacteria, as the typing or identification of C. glutamicum or related bacteria, as the typing or identification of C. glutamicum genome, and as markers for
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                      Sequence 1109 BP; 236 A; 278 C; 303

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                           production. The C. glutamicum SMP gene can be used in vectors (II) for expression in host cells and production or modulation of production of fine chemicals, such as, an organic acid, a proteinogenic or nonproteinogenic amino acid (preferred), a purine or pyrimidine base, a concleoside, a nucleotide, a lipid, a saturated or unsaturated fatty acid, a diol, a carbohydrate, an aromatic compound, a vitamin, a cofactor, a copolyketide, or an enzyme. The presence of (I) or SMP proteins (III) concled by them are used for diagnosing the presence or activity of corynebacterium diphtheriae in a subject. (I), (II), (III) or host cells containing them are used to map genomes of organisms related to C. glutamicum, identify and localise C. glutamicum sequences of interest, in evolutionary studies, in determining SMP protein regions required for function, in modulating SMP protein activity, in modulating the metabolism of sugars, and in modulating high-energy molecule production
                                                                                                                                                                                                                                                                                                                                                                                                                                                 Query Match

Novel polynuclectides derived from Coryneform bacteria, for identifying mutation point of a gene, measuring expression of a gene, analyzing expression profile or pattern of a gene and identifying homologous gene

A gene, and fring homologous :

gene

Claim 8; SEQ ID NO 2906; 246pp + Sequence Listing; English

XSSSSSSSSSSSSXXX

Query Match Best Local Simi Matches 711; The present invention provides a number of nucleotide and protein sequences from the Coryneform bacterium Corynebacterium glutamicum. These are useful for identifying the mutation point of a gene derived from a mutant of coryneform bacterium, measuring expression amount and analysing the expression profile or expression pattern of a gene derived from Coryneform bacterium, and identifying a homologue of a gene derived from coryneform bacterium. Coryneform bacteriam are useful for producing amino particularly L-lysine. The present sequence is a nucleic acide described in the exemplification of the invention. Note: The sequence data for this patent did not form part of the printed specification, but was obtained in electronic format directly from the European Patent Office Sequence 759 BP; 211 A; 209 C; 189 G; 150 T; 0 U; 0 Other; 2267 2147 1848 1728 1548 ATGGAAATCACTATCTGCAAAGACGAGCAAGAAGTCGGCAAAGCAGTTGCAGTCCTAATC 1607 2207 2087 2027 1967 1908 1788 1668 1608 601 541 481 421 361 301 241 181 661 121 721 61 μ Similarity GCACCCTTCGCCAACAAGGGTGGAACCTTGGGGCTTGCAACAGGATCCTCACCACTGAGT 1667 GCTGATCACCGTCTCATGGAGCAATTAAAGCTGCGC GCTGATCACTACCGTCTCATGGAGCAATTAAAGCTGCGC CAGATGCACAACAATGCCACCATCATCGTTGATGAAGCAGCAGCATCCAAGCTGGAAAAC TAGATGCACAACATGCCACCATCATCGTTGGATGAAGCAGCAGTATCCAAGCTGGAAAAC 2266 GACGCCATCCGCGGAACTGTGGAAGGCCCACTGACCGCCATGTGCCCAGGTTCCATCCTG GACGCCATCCGCGGAACTGTGGAAGGCCCAGTGACTGCTTCTTGCCCAGGTTCCATCCTG TTGGGCACTTTGTCCCGCGCAAAACATCGTGTTGGTGGCAACTGGTGAAGGAAAAGCC TTGGGCACTTTGTCCCGCGCGCAAAACATCGTGTTGGTGGCAACTGGTGAAGGGAAAAGCC GACAACGCTCGATTCTTCAACACCATCGAAGAGGTCCCAACCCACGCCCTCACCCAGGGT GACAACGCTCGATTCTTCAACACCATCGAAGAGGTCCCAACCCCACGCCGTCACCCAGGGT CCATCATCTTCTCTCTGAGACTGACAAAGGTCCAGGCGCTGCACCCTAAAACTGTGGAG CCATCATCTTCTCTGTCAGGACTGACAAAGGTCCAGGCGCTGCACCCTAAAACTGTGGAG GAATCCGTTGATGTTCAAATCCTTGGCATCGGCGGAAACGGCCACATCGCTTTCAATGAG GAATCCGTTGAAGTTCAAATCCTTGGCATCGGCGGAAACGG-CACATCGCTTTCATTGAA 1966 GATGGTGCAAACCCTGATCCATACGAAGCAGCTGCAGAGTATGAGGCAAAGATCGCTGCA GATGGTGCAAACCCTGATCCCATACGAAGCAGCTGCAGAGTATGAGGCAAAGATCGCTGCA 1907 ACCATTCGTAAAGAGTTCACTGACCACATCGACATCGTTGATGAAGAGGTCTACAGCCCA ACCATTCGCAAAGAGTTCACTGACCACATCGACATCGTTGATGAAGAGGTCTACAGCCCA 1847 GCATTCTTGTTGGATGAATACGTGGGATTAACGCGCGACGATGAAAACAGCTACTTCAAA GCATTCTTGTTGGATGAATACGTGGGACTAACCCCGTGACGATGAAAACAGCTACTTTAAA 1787 ACCTACCAAGAGCTCATTCGCATGTATGAAGCTGGGGGAAGTGTCATTCAAGAACTGCAAG 1727 GCACCCTTCGCAACTAAGGGCGGAACCTTGGGGGCTTGCAACTGGATCGTCACCTTTGAGC ATGGACATCATCTGCAAAGACGAGCAAGAAGTCGGCAAAGCAGCGGCAGCCCTGATC ACCTACCAAGAGCTCATTCGCATGTATGAAGCTGGGGAAGTGTCATTCAAGAACTGCAAG Conservative 11.3%; 0, Score 671.8; DB 5; Pred.                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                          OM nucleic - nucleic search, using sw model
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                            Database
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                       Pred. No. is the number of results predicted by chance to have a score greater than or equal to the score of the result being printed, and is derived by analysis of the total score distribution.

US-09-710-279-3464/c
Sequence 3464, Application US/09710279
Patent No. 6703492
GENERAL INFORMATION:
APPLICANT: KIMMERLY, WILLIAM JOHN
APPLICATION: STAPHYLOCOCCUS EPIDERMIDIS NUCLEIC ACIDS AND PROTEINS
FILE REFERENCE: PU3480US
CURRENT FILING DATE: 2000-11-09
PRIOR APPLICATION NUMBER: US/09/710,279
CURRENT FILING DATE: 2000-11-09
PRIOR APPLICATION NUMBER: 66/164,258
PRIOR FILING DATE: 1999-11-09
NUMBER OF SEQ ID NOS: 4472
SOFTWARE: PATENTIN Ver. 2.1
SEQ ID NO 3464
LENGTH: 2913
TYPE: DNA
ORGANISM: Artificial Sequence
FEATURE:
OTHER INFORMATION: Description of Artificial Sequence: synthetic
OTHER INFORMATION: nucleic acid sequence

TITLE OF INVENTION: NUCLEIC ACID AND AMINO ACID SEQUENCES RELATING TO KLEBSIELLA
TITLE OF INVENTION: PNEUMONIAE FOR DIAGNOSTICS AND THERAPEUTICS
FILE REFERENCE: 2709.2004001
CURRENT EPLICATION NUMBER: US/09/489,039A
CURRENT FILING DATE: 2000-01-27
PRIOR APPLICATION NUMBER: US 60/117,747
PRIOR FILING DATE: 1999-01-29
NUMBER OF STO. 1999-01-29
                                                                                                                                                                                                                                                                                                                                                               -09-489-039A-6203
                                                                                                                                                                                                                                                                                           Local Similarity
